2 RUNNING APPLICATION

Signup is accessible via the *File* menu.

Basic functionality is implemented for users, but some things need planned out for later:

1. invalid or identical name/email
2. canceling the signup procedure
3. forcing legal input on both fields upon pressing OK
4. location/type of underlying multi-user data structure

About is accessible via the *Help* menu.

Every group member has the basic eclipse/github setup or equivalent. We hope to have everyone demonstrate code retrieval and editing by Saturday, though issues may postpone this until our next meeting on Tuesday.

3 JUNIT COVERAGE

Current trivial tests:

1. tests default constructor for first name

2. tests default constructor for email

3. tests toString() of User.class

```
                        lumen@ous:~/working/Iteration1/src                              ⊗
                   lumen@ous:~/working/Iteration1/src 101x25
[lumen@ous src]$ javac -cp .:junit-4.12.jar UserTest.java
[lumen@ous src]$ java -cp .:junit-4.12.jar:hamcrest-core-1.3.jar org.junit.runner.JUnitCore UserTest
JUnit version 4.12
...

Time: 0.004

OK (3 tests)
```
